

THERMO CONCEPTS

Visual inspection of the thermostat to verify if the thermostat has continuity.

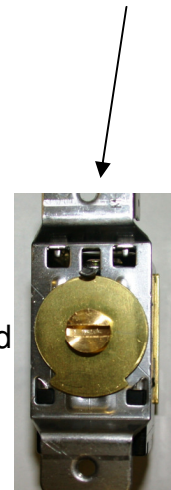

For the Danfoss thermostat (silver color)

Look on the right side of the thermostat.
If you see a pin, this will indicate that the thermostat is good..
If you don't see it, thermostat is defect.

For the Ecotherm thermostat (goldencolor)

Look on the top of the thermostat.
If the pin is toward the front that indicates that the thermostat is good
If the pin is toward the back, thermostat is defect.

If the thermostat is good and the compressor is not starting, the problem could come from the control box on the compressor.
